Design Aesthetics

Manifesto

My manifesto is in form of a List. After all the sessions, this includes some concepts which I thought I should go through while developing any new project.

I have written some of my thoughts for each page which I would read while working and would provoke me to think in terms of asthetics.

1. **Be Aware**
   Observe
   Acknowledge

2. **Reflect**

3. **Understand**

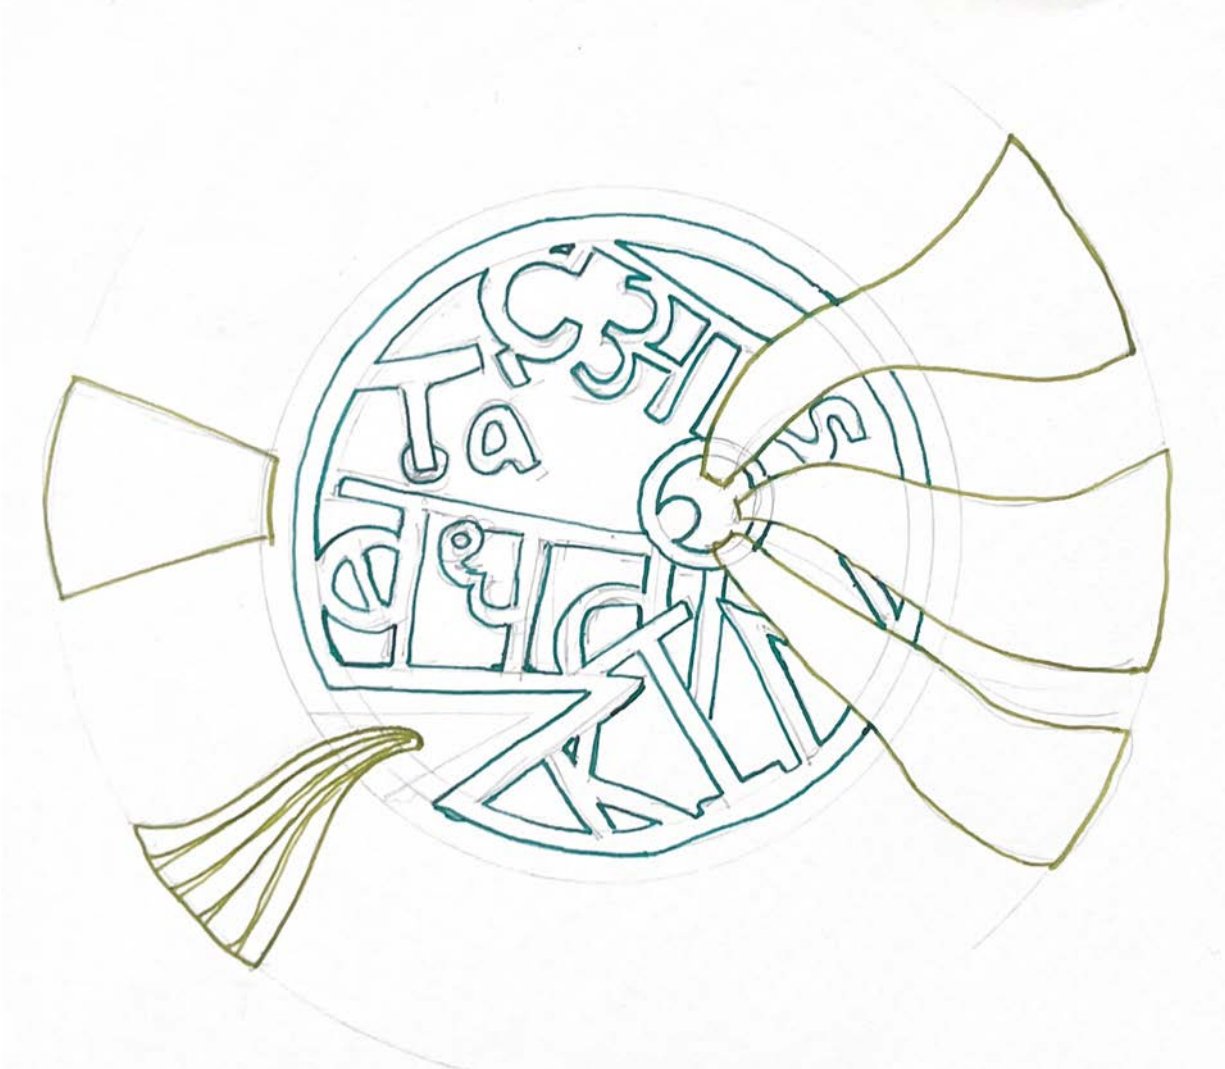

4. **Act**

Structure to Follow While Applying The Following

Language

- Understand how words you use in design
  1. shape your thoughts
  2. shape others perception

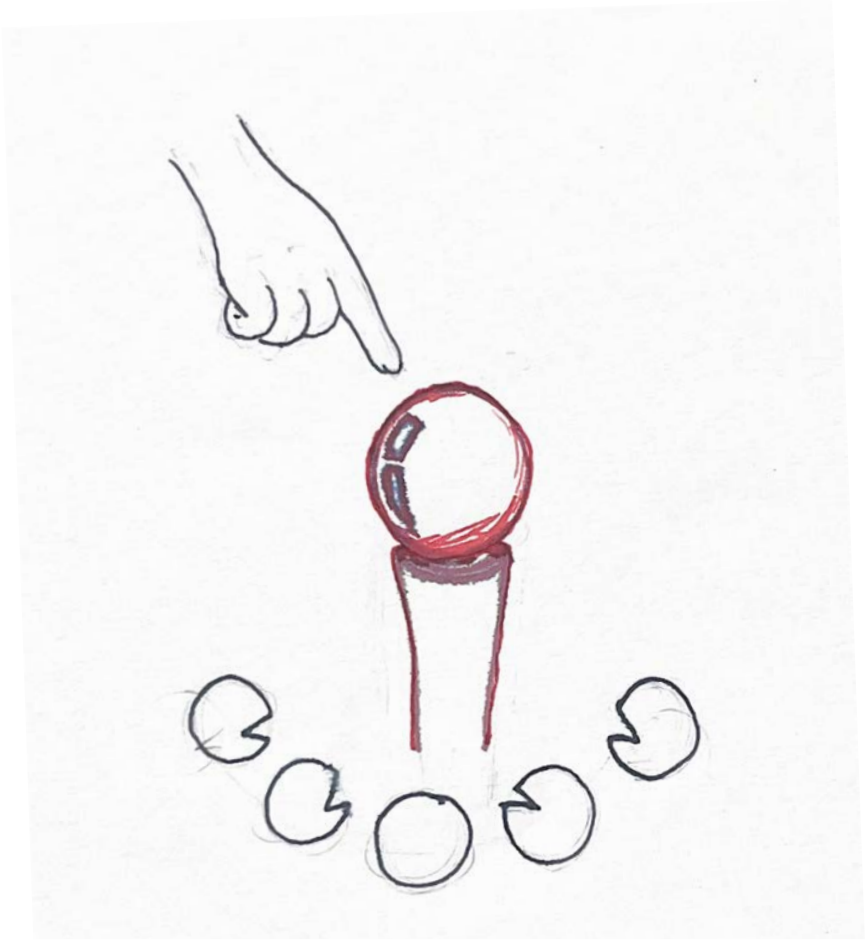

- Linguistic choice always effects the users and society

Beauty

- Understand what you find beautiful, recognize what is guiding your taste, who is in power through your perception

- Question the systems and voices that hold power over our perception of beauty. Who should be in power the beholder or someone else?

Consider KIN

- Design with empathy towards kin - for all living beings

- Acknowledge interconnections across communities, environments, and ecologies.

Diversity

- Accept everyone has their own taste.

- Avoid imposing but rather inviting them to try/ taste your aesthetics

Emergence

- In a world where we use thing developed, proved, made possible because of science might confuse us between method of science and scientism.

- Some things are understood only through holistic approach as they are emergent properties.
